HACKATHON WINS

Wizard Hackathon — San Francisco · June 2026 **2nd Place Overall | Best Use of You.com | Best Use of FinChip**

- **Zero human steps** after the initial prompt — **Conjure**, a voice-to-3D-print agent: speech → 3D model (Meshy AI) → sliced (CuraEngine) → dispatched directly to a Neptune 4 Pro printer.
- **Morph-Forge**, a fully autonomous CAD pipeline — researches real engineering specs (You.com + Tavily), writes parametric OpenSCAD scripts via Nebius Llama-70B, then renders and dispatches to print end-to-end.

Stack: *InsForge · ElevenLabs · Kite AI · Topify*

Applied Intelligence Hackathon **3rd Place (600+ participants) | Best Use of Kalibr**

- **No human in the loop** — **Sentinel**, an autonomous compliance agent: detects a security-policy violation in a PR, rewrites the code in a Daytona sandbox, reruns tests until green, and auto-merges (Opsera security gate, Slack alerts).

ClickHouse × Hex Hackathon **Best Use of Postgres**

- **VIGIL**, an AI eldercare guardian processing **847K behavioral events** at **sub-100ms latency** from one camera — detects falls and anomalies before they become emergencies and alerts family via a Claude-powered phone call.

Beta Fund × Antler Hackathon

- **AssistView**, an accessibility app for blind, memory-impaired, and cognitively disabled users — YOLOv8n on-device at **30fps** for instant safety alerts, Claude Sonnet scene description every 4s, and face recognition for dementia patients.

Stack: *React Native + Expo · Claude Sonnet 4.6 · Butterbase* | Live: assistview.butterbase.dev

PROJECTS

Trading Agent (Python)

Statistically validated autonomous quant fund — permutation test **p=0.001** across **1,998 trades (+0.455R expectancy)**. A 10-phase pipeline scores **173 stocks + 23 crypto** assets 0–100 by fusing SEC EDGAR insider filings, analyst targets, and social sentiment with XGBoost + RandomForest; Streamlit dashboard with Telegram alerts.

ER Wait Oracle (TypeScript / Node)

Predicts SF ER busyness **4 hours ahead** by fusing CMS hospital baselines with live Open-Meteo weather data into ClickHouse; Claude (forced tool-use + prompt caching) generates calibrated per-ER busy scores hourly.

DealGhost

Autonomous revenue memory for sales teams, built **entirely from a user's own historical data** — reads past sales calls, learns the patterns behind lost deals, and intervenes automatically the moment a live deal starts matching a known loss signature. Best Use of Butterbase, Agent Native Company Hackathon.

TECHNICAL SKILLS

Languages	Python · TypeScript · JavaScript · Node.js
AI / ML	Claude (Anthropic SDK) · XGBoost · RandomForest · YOLOv8 · Prompt Caching · Structured Outputs · Forced Tool-Use
Databases	ClickHouse · PostgreSQL
Tools	React Native · Expo · Streamlit · Docker · OpenSCAD · CuraEngine
APIs	Alpaca · SEC EDGAR · Butterbase · InsForge · Meshy AI · ElevenLabs · You.com · Tavily · Nebius · Kite AI
Domains	Cybersecurity · AI Agents · Quant Finance · Accessibility Tech · Hardware / IoT

EDUCATION

Purdue University — B.S. Cybersecurity (In Progress)
